

WHAT IS IT?

It is a 100% natural powder, composed of 99% cornstarch and 1% food coloring. It does not contain gluten.

IS IT DANGEROUS?

No, it is absolutely safe for your health and for the environment. However, we do not recommend its use if you have breathing problems or a specific allergy to the product. Do not use it in closed or poorly ventilated spaces.

DOES IT STAIN CLOTHES?

Usually the powder is completely removed within a few washes. Be aware that some fabrics might retain the colors more than others. We therefore recommend you not to wear your favourite items when using the holi powders and to wash your clothes right after the event.

EYES

Our Holi powders do not contain irritating or dangerous substances. If it gets into your eyes, wash them with abundant water. If you have very sensitive eyes or you regularly wear lenses, you can wear sunglasses to protect your eyes.

MOUTH

Since the powders are made of edible ingredients, their accidental consumption does not entail any risk.

SKIN

The powders are not dangerous for your skin, however we recommend to use a hydrating lotion before and after the event, in order to easily remove them.

HAIR

In most cases, the colours disappear by washing them once or twice. However, the Holi powders could stick to dyed, discolored or blond hair. We recommend not to wet the hair before the event and to protect it with a specific hair conditioner. Another option to protect your hair would be to wear a funny hat or a wig.

GROUND AND WALLS

We recommend to sweep the floor to remove the excess powder and then wash it with water. Do not worry if there is some powder left, it is biodegradable.

CAMERAS AND ELECTRONIC DEVICES

Remember to protect your camera or electronic device by using a hermetic or plastic bag, so that the powders can not get inside.
